**American Union School Has Levels of Uranium  
Above Drinking Water Standards**

---

Water produced by the sole well, Well 01 of our water system failed a drinking water standard. Although this is not an emergency, as our customers, you have a right to know what you should do, what happened and what we are doing to correct this situation. We routinely monitor for the presence of drinking water contaminants. Water sample results collected on 01/08/2016 showed uranium levels of 38.86 pCi/L. This is above the standard or maximum contaminant level (MCL) of 20 pCi/L. Compliance is based on average of four quarters of data.

**What should I do?**

- **You do not need to use an alternative (e.g. bottled) water supply.** However, if you have specific health concerns, consult your doctor.
- *This is not an emergency. If it had been, you would have been notified immediately. However, some people who drink water containing uranium in excess of the MCL over many years may have kidney problems or an increased risk of getting cancer.*
- If you have other health issues concerning the consumption of this water, you may wish to consult your doctor.

**What happened? What was done?**

Provide bottled water for concerned individuals.

We anticipate resolving the problem within 03/01/2019.
